OraTec
Anti-Infective Perio

Product Details & Highlights

TheraSol Tartar Dissolver is a revolutionary product that actually loosens and dissolves hardened calculus (tartar). It's the perfect adjunct for those patients that form heavy calculus between visits, especially the ones you dread seeing on the appointment book. L It's not an instant cure, but used regularly over 10-14 days, it dissolves most types of calculus. Especially tenacious or burnished calculus may not dissolve entirely, but it becomes soft enough to scale without difficulty.

The Science

Calculus formations are the mineralized remnants of the dead microbes in biofilms. When they die, the phosphor-lipid molecules in their cell walls break down and bind to soluble calcium & phosphate ions in saliva and crevicular fluid forming a salt compound that gradually hydrolyzes into the mineral hydroxyapatite. Mineral hydroxyapatite binds tightly to teeth because the teeth are made from crystalline hydroxyapatite.

TheraSol TarTar Dissolver

Now available in a great tasting Mint Flavor!

The ingredients in TheraSol Tartar

Dissolver (Tetrapotassium pyrophosphate, Sodium tripolyphosphate, Sodium bicarbonate, Citric acid and Sodium fluoride) reverse the chemical reactions that turn dead bacteria into calculus. They gradually neutralize the chemical bonds between the calcium and phosphate ions in hydroxyapatite, weakening the structure that binds it together and to the tooth. Working from the outermost layer in, it typically takes 10-14 days to dissolve most heavy calculus.

For healthy gums at any age!

OraTec
Anti-Infective Perio

Use as an oral rinse or brush on with your toothbrush!

HOW TO USE:

CALCULUS LEVEL	LIGHT-MEDIUM	METHOD
Light	1 scoop : 1 cup	Brush
Heavy	2 scoops : 1 cup	Brush

Brushing can only reach 3-4 mm below the gum line. In deeper pockets (>4mm) use a cannula style tip on a Viajet Oral Irrigator) in addition to brushing.
